Saving Lives and Improving Health Outcomes in Mali through Increased Access to Contraceptives

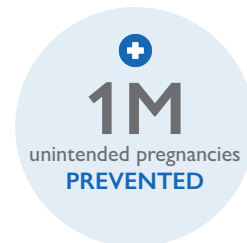

Access to voluntary family planning and reproductive health (FP/RH) services is vital for safe motherhood and healthy families. Having a choice of modern contraceptives allows couples to plan and space births, ensuring families have the means to properly care for their children. USAID ensures an uninterrupted supply of quality FP commodities worldwide through the USAID Global Health Supply Chain Program—Procurement and Supply Management (GHSC-PSM) project.¹

With a population of 19.7 million²—more than double what it was in 1990—the average woman in Mali gives birth to 5.9 children in her lifetime.³ In 2019, approximately 25.2 percent of women in Mali had an unmet need for FP—meaning they wanted to avoid pregnancy but were not using a modern method of birth control.⁴

The maternal mortality ratio in Mali is 562 per 100,000 live births, compared to the average of 534 for sub-Saharan Africa.⁵ The child mortality rate among children under five is 94 deaths per 1,000 live births, compared to 76 for the sub-Saharan region.⁶

To address Mali's maternal and child health needs, the Government of Mali is collaborating with USAID and other partners. This includes increasing investment in FP/RH to reach a projected modern contraceptive prevalence rate of 16.7 percent among all women aged 15 to 49, regardless of marital status, by 2020.⁷

Estimated health impacts from USAID procurement investments

¹Unless otherwise noted, all figures reported in this brief are over the life of the GHSC-PSM project and do not reflect USAID's contraceptive investment prior to FY 2017. The figures reflect delivered commodities, not shipped commodities, and may not be comparable to figures reported in previous materials.

USAID Contraceptive Investment

In partnership with the Government of Mali and other in-country stakeholders, USAID supported the procurement and distribution of over 7,398,060 FP/RH products to more than 1,430 USAID-supported facilities and organizations in Mali from FY 2017-2020. The contraceptives, when combined with proper counseling and correct use, are estimated to provide approximately 2,422,831 million couple years protection⁸ and help prevent:

- 1 million unintended pregnancies
- 430,000 abortions
- 4,000 maternal deaths
- 27,000 child deaths⁹

These investments in contraceptives have the potential of saving approximately **\$57 million** in direct spending on healthcare—resources that can be reinvested in Mali's health system.

Through its investments in contraceptives and supply chains, USAID, in collaboration with other global and in-country partners, is helping Mali meet its people's FP/RH needs. Countries that partner with USAID to invest in FP/RH can achieve greater self-reliance by improving their overall health systems and empowering families to plan for their futures.

Methodology

The indicators presented in this brief were calculated by entering procurement data from the GHSC-PSM project database¹⁰ into the Impact 2 model,¹¹ a socio-demographic mathematical model used to measure the impact of FP/RH programs.

The FP/RH impact indicators, as reported in this brief, estimate the global demographic, health and economic impact of the GHSC-PSM project thus far. To make these calculations, GHSC-PSM adjusted certain criteria in the model. For more information, please contact PSMMonitoringandEval@ghsc-psm.org.

“The adoption of Mali’s family planning policy will prevent several unintended pregnancies and save many lives. I would therefore like to thank USAID and all of Mali’s other partners for this major achievement.”

– Kassoumou Diarra, National Directorate of Public Health

CONTRACEPTIVE METHODS ¹²	TOTAL PRODUCTS DELIVERED FY 2017-2020*
Combined oral contraceptives	4.7M
Progestin only pills	80K
Copper intrauterine device	30.6K
Implantable contraceptives	370K
Injectable contraceptives	2.2M
TOTAL NUMBER OF CONTRACEPTIVES DELIVERED	7,398,060
TOTAL VALUE OF COMMODITIES	\$6,367,180**

*Data through Q2 of FY 2020

**This figure represents solely the calculation of the value of commodities and does not include shipment or other associated costs.

⁸CYP is the estimated protection provide by contraceptive methods during a one-year period, based upon the volume of all contraceptives sold or distributed free of charge to clients during that period. <https://www.usaid.gov/global-health/health-areas/family-planning/couple-years-protection-cyp>

⁹This indicator only estimates reduction in deaths as a result of improved birth spacing. The data linking the contraceptive prevalence rate, birth spacing and child mortality is currently limited.

¹⁰GHSC-PSM's Automated Requisition Tracking Management Information System (ARTMIS) is used to enter, manage, process and track orders throughout the supply chain.

¹¹<https://www.maristopes.org/what-we-do/our-approach/our-technical-expertise/impact-2/>, Accessed March 16, 2020. The number of preventable deaths, abortions and unintended pregnancies averted is calculated by entering into the model the number of FP/RH commodities delivered by GHSC-PSM across a selected time period.

¹²Units of measurement for contraceptives: combined oral (cycle); implantable (implant); standard days (piece); injectable (device); condoms (piece); progestin only pills (cycle); copper-bearing intrauterine (device); emergency oral (package)
