

2022 UPDATE 

FAMILY PLANNING | REPRODUCTIVE HEALTH

IMPACT BRIEF: MOZAMBIQUE

Saving Lives and Improving Health Outcomes in Mozambique through Increased Access to Contraceptives

Access to voluntary family planning and reproductive health (FP/RH) services is vital for safe motherhood and healthy families. Having a choice of modern contraceptives allows couples to plan and space births, ensuring families have the means to properly care for their children. USAID ensures an uninterrupted supply of quality FP/RH commodities worldwide through the USAID Global Health Supply Chain Program—Procurement and Supply Management (GHSC-PSM) project.¹

With a population of 32.1 million²—more than double what it was in 1990—the average woman in Mozambique gives birth to 4.7 children in her lifetime.³ In 2022, approximately 22.4 percent of married women in Mozambique had an unmet need for FP— meaning they wanted to avoid pregnancy but were not using a modern method of birth control.⁴

The maternal mortality ratio in Mozambique is 289 deaths per 100,000 live births, compared to 542 for sub-Saharan Africa, on average.⁵ The child mortality rate is 71 deaths among children under 5 per 1,000 live births, compared to 74 for the sub-Saharan region.⁶

To address Mozambique's maternal and child health needs, the Government of Mozambique is collaborating with USAID and other partners. This includes increasing investment in FP/RH to reach a projected modern contraceptive prevalence rate of 34.4 percent among married women aged 15 to 49, regardless of marital status, by 2022.⁷

USAID Contraceptive Investment

In partnership with the Government of Mozambique and other in-country stakeholders, USAID supported the procurement and distribution of over 23 million FP/RH products to USAID-supported facilities and organizations in Mozambique from FY 2017-2022. The contraceptives, when combined with proper counseling and correct use, are estimated to provide approximately 8.9 million couple years protection⁸ and to help prevent:

- 4 million unintended pregnancies
- 1 million abortions
- 9,000 maternal deaths
- 100,000 child deaths⁹

These investments in contraceptives have the potential of saving approximately **\$267 million** in direct spending on healthcare¹⁰—resources that can be reinvested in Mozambique's health system.

Through its investments in contraceptives and supply chains, USAID, in collaboration with other global and in-country partners, is helping Mozambique meet its people's FP/RH needs. Countries that partner with USAID to invest in FP/RH can achieve greater self-reliance by improving their overall health systems and empowering families to plan for their futures.

Methodology

To measure the impact of FP/RH programs, the indicators presented in this brief were calculated using the Impact 2 model¹¹, a socio-demographic mathematical model, using procurement data from the GHSC-PSM project database¹².

The FP/RH impact indicators, as reported in this brief, estimate the demographic, health, and economic impact of USAID's support of contraceptives to Mozambique's health programs.

For more information, please contact PSMMonitoringandEval@ghsc-psm.org.

⁸ CYP is the estimated protection provide by contraceptive methods during a one-year period, based upon the volume of all contraceptives sold or distributed free of charge to clients during that period. <https://www.usaid.gov/global-health/health-areas/family-planning/couple-years-protection-cyp>

⁹ This indicator only estimates reduction in deaths as a result of improved birth spacing. The data linking the contraceptive prevalence rate, birth spacing and child mortality is currently limited.

¹⁰ The figures are not adjusted for inflation and based on the costs of services from 2011.

¹¹ <https://www.maristopes.org/what-we-do/our-approach/our-technical-expertise/impact-2/>, Accessed November 30, 2022. The number of preventable deaths, abortions and unintended pregnancies averted is calculated by entering into the model the number of FP/RH commodities delivered by GHSC-PSM across a selected time period.

¹² GHSC-PSM's Automated Requisition Tracking Management Information System (ARTMIS) is used to enter, manage, process and track orders throughout the supply chain.

¹³ Units of measurement for contraceptives: combined oral (cycle); implantable (implant); standard days (piece); injectable (device); condoms (piece); progestin only pills (cycle); copper-bearing intra-uterine (device); emergency oral (package)

“USAID has pledged to continue to support efforts to defend the right of individuals, especially women, to plan their families and to end all unmet FP needs. But it knows it can't do this alone, so it always works hand in hand with the Ministry of Health and through its funded partners.”

– Dr. Alda Govo, Head of the FP/RH division at Mozambique's Ministry of Health

CONTRACEPTIVE METHODS ¹³	TOTAL PRODUCTS DELIVERED FY 2017-2022*
 Combined oral contraceptives	6.7M
 Progestin only pills	4.2M
 Copper bearing intrauterine devices	309K
 Implantable contraceptives	1.1M
 Injectable contraceptives	10.8M
TOTAL NUMBER OF CONTRACEPTIVES DELIVERED	23.1M
TOTAL VALUE OF COMMODITIES	\$23.7M*

*This figure represents solely the calculation of the value of commodities and does not include shipment or other associated costs.
