Access to voluntary family planning and reproductive health (FP/RH) services is vital for safe motherhood and healthy families. Having a choice of modern contraceptives allows couples to plan and space births, ensuring families have the means to properly care for their children. USAID ensures an uninterrupted supply of quality FP/RH commodities worldwide through the USAID Global Health Supply Chain Program-Procurement and Supply Management (GHSC-PSM) project.\(^1\)

With a population of 22 million—more than double what it was in 1990—the average woman in Mali gives birth to 6 children in her lifetime.\(^2\) In 2022, approximately 24.4 percent of married women in Mali had an unmet need for FP—meaning they wanted to avoid pregnancy but were not using a modern method of birth control.\(^3\)

The maternal mortality ratio in Mali is 562 per 100,000 live births, compared to the average of 542 for sub-Saharan Africa.\(^4\) The child mortality rate among children under five is 91 deaths per 1,000 live births, compared to 74 for the sub-Saharan region.\(^5\)

To address Mali’s maternal and child health needs, the Government of Mali is collaborating with USAID and other partners. This includes increasing investment in FP/RH to reach a projected modern contraceptive prevalence rate of 19.7 percent among married women aged 15 to 49 by 2022.\(^6\)

\[^1\] Unless otherwise noted, all figures reported in this brief are over the life of the GHSC-PSM project and do not reflect USAID’s contraceptive investment prior to FY 2017. The figures reflect delivered commodities, not shipped commodities, and may not be comparable to figures reported in previous materials.

USAID Contraceptive Investment

In partnership with the Government of Mali and other in-country stakeholders, USAID supported the procurement and distribution of over 41 million FP/RH products to more than 1,430 USAID-supported facilities and organizations in Mali from FY 2017-2022. The contraceptives, when combined with proper counseling and correct use, are estimated to provide approximately 4 million couple years protection and help prevent:

- 1.7 million unintended pregnancies
- 700,000 abortions
- 6,000 maternal deaths
- 44,000 child deaths

These investments in contraceptives have the potential of saving approximately $92 million in direct spending on healthcare resources that can be reinvested in Mali’s health system. Through its investments in contraceptives and supply chains, USAID, in collaboration with other global and in-country partners, is helping Mali meet its people’s FP/RH needs.

Countries that partner with USAID to invest in FP/RH can achieve greater self-reliance by improving their overall health systems and empowering families to plan for their futures.

Methodology

To measure the impact of FP/RH programs, the indicators presented in this brief were calculated using the Impact 2 model, a socio-demographic mathematical model, using procurement data from the GHSC-PSM project database.

The FP/RH impact indicators, as reported in this brief, estimate the demographic, health, and economic impact of USAID’s support of contraceptives to Mali’s health programs.

“I came to request family planning services. This service is very useful for me because, as a student, it allows me to pursue my studies and continue with my couple life. I came back satisfied because I was able to receive my preferred contraceptive method.”

–Hadjiratou Kane
